

Composite Stairs (train platforms)

Lantor Soric® is used in this product:

- To save weight
- To improve flexural strength & modulus
- As an infusion (flow) medium
- Have easy profiling and rot free core

Description:

This application has been designed as an over-boarding of 10/12 mm GRP composite.

This profile is produced with closed mould technology that can, because of the replacement of the Plywood by Lantor Soric®, be cut with a grinder on site to any shape with no need to edge seal. By using Lantor Soric® a rot free, stiff and lighter stair profile is being produced.

Production technology:

RTM Light

Laminate build-up:

Surface
CSM 600 gms
Lantor Soric®
Lantor Soric®
CSM 600 gms

Resin type:

Polyester resin
